

ANTI-SPYWARE™

Stop Internet spyware programs in their tracks

Description

Preventon Anti-Spyware is designed to provide advanced protection from data-mining, aggressive advertising, parasites, scumware, trojans, dialers, malware, browser hijackers, and tracking components.

The latest release of Anti-Spyware from Preventon takes the fight against spyware to the next level.

With all new Code Sequence Identification (CSI) technology, Preventon Anti-Spyware ensures your home computer is protected from known spyware and many unknown variants.

Amongst its armory of protective measures, Preventon Anti-Spyware has the capability to scan and list Alternate Data Streams (ADS) in NTFS-enabled volumes. In combination with its new scanning engine, Preventon Anti-Spyware will also scan your computer faster and more thoroughly than ever before!

Preventon Spywatch™ is the real-time file monitor included in Preventon Anti-Spyware. Preventon Spywatch goes beyond what many other security suites offer by adding another layer of proactive protection to your system: it runs silently in the background, proactively watching for malware, parasites and other spyware forms that try to install on or modify your system.

While Preventon Anti-Spyware detects and cleans known malware and parasites, from your system, Preventon Spywatch goes even further by catching these programs before they hit your desktop. If malware or parasites are detected while you surf the Internet or run programs, Preventon Spywatch pops up, unloads the particular spyware module that it has detected is running and launches Preventon Anti-Spyware.

Advanced features mean you can lock the start-up sections of your registry, block possible and actual browser hijack attempts, block suspicious processes, lock executable file associations, block malicious cookies & pop-ups, and uses the all new CSI technology to protect you from unknown variants as well. Even if Preventon Spywatch is turned off and something DOES install onto your system, it will detect it and kill the process as soon as it is turned back on.

Do you use the Internet?

Would you leave your private information out for anyone to read?

Is your PC behaving strangely - loading pages you have not requested or displaying unfamiliar dialog screens?

Are you concerned about incurring massive phone connection charges as a result of rogue 'dialer' programs?

Get Preventon Anti-Spyware now!
