

Description

The threat from computer viruses has never been greater. Through the use of our corporate-grade virus detection technology, Preventon Antivirus stops infection from malicious virus, worm and Trojan programs. By automatically detecting their presence, cleaning and removing infected files before they have a chance to enter your system and destroy data, Preventon Antivirus offers powerful protection for your home computer.

Preventon's Dual AV Technology™ employs a two stage protective shield against the threat from virus attack:

Stage one: The Preventon Antivirus Real-Time File Monitor provides users with automatic virus, worm and Trojan protection. It auto-scans files and email attachments as they are accessed, ensuring infections never enter the operating system environment.

Stage two: Preventon Antivirus Scanner can be used to run scans on demand. This provides you with the highest possible 'deep level' protection against viruses, worms and Trojans as well as allowing you to choose the most appropriate scanning settings from an easy to use configuration screen.

- Corporate-strength virus protection •
- Regular updates •
- Small 'digital footprint' •
- Highly intuitive GUI •
- Minimal support requirement •
- Preventon *PASS* compatible •

Features

Acclaimed Virus Detection Engine – The AV detection technology offered by Preventon already protects millions of computers worldwide.

Silent Protection – Downloads in minutes, installs in seconds and protects your PC from virus attacks - scanning files instantly upon their access. Once in place, Preventon Antivirus sits silently in your taskbar only displaying alert messages on screen to warn you of any files that have been found to contain malicious code.

Auto Scan - Automatic, scheduled scans can be set to scan all your PC's hard drives whilst the machine is not in use at night, or any other time that suits you.

Live Sync – This is an easy to use feature that updates the Preventon virus dictionary whilst you are online to ensure you are always protected with 100% up-to-date software. The Live Sync process can be scheduled to run automatically for up-to-the-minute protection.

Supported Operating Systems – Preventon Antivirus is supported on Windows XP, Windows Vista 32 and Windows Vista 64, Windows 7 32 Bit and Windows 7 64 Bit.
